上課地點: 華夏恆毅樓D607
上課時間: R6, R7, R8 (13:20-16:30)
學分數: 3小時
Office Hours: 10:30 am – 12:30 pm (Mon. and Tues., or by appointments)

I. Course Overview and Description

This course investigates the intersection of **Well-being Science (Positive Psychology)** and **Digital Social Emotional Learning (SEL)**. As emotional intelligence training moves into complex digital ecosystems—including AI tutors, mobile apps, and immersive VR—it is essential to evaluate these technologies through a rigorous research lens.

Students will analyze how digital environments influence human flourishing, resilience, belonging, agency, and empathy, bridging theoretical constructs such as **the PERMA-V model** and **CASEL competencies** with emerging frameworks in digital learning sciences. Rather than treating well-being as a purely individual intervention, this course positions digital discourse, AI-supported reflection, and collective meaning-making as researchable phenomena within technologically mediated environments.

This "hands-on" course translates academic findings into structured scholarly practice. Through a semester-long Digital SEL Discourse Laboratory conducted within Moodle, students collaboratively construct theory-grounded dialogue around weekly themes. This structured discourse functions both as an applied learning experience and as a research corpus for conceptual synthesis (MA track) and empirical discourse analysis (PhD track). Students examine how language, interaction patterns, and digital affordances shape well-being cognition in real time.

The course integrates perspectives from positive psychology, educational psychology, neuroscience, discourse analysis, and digital learning sciences, focusing on how well-being can be designed, measured, interpreted, and ethically enhanced in digitally transformed systems. Students engage in literature curation, critical tool analysis, structured peer review, AI-assisted analytic workshops, and publication-oriented manuscript development.

By the end of the course, students will not only understand **the mechanisms of human flourishing in digital contexts**, but also develop the capacity to design, critique, and empirically investigate digital well-being ecosystems. The course ultimately nurtures human-centered innovators and scholars capable of producing high-impact research suitable for SSCI- and SCI-indexed journals while maintaining ethical and socially responsible technological practice.

II. Learning Objectives

By the end of this course, students will be able to:

- **Demonstrate advanced understanding of well-being science and SEL frameworks**
  (e.g., PERMA, Self-Determination Theory, Flow, Narrative Identity) and articulate their relevance within digital contexts.
- **Critically evaluate digital well-being tools and AI-based systems** through theoretical, empirical, and ethical lenses.
- **Analyze digital discourse as a research object**, identifying linguistic, relational, and conceptual patterns related to well-being and SEL.
- **Apply AI-assisted analytical approaches responsibly**, with transparency and ethical awareness.
- **Develop publication-oriented scholarly writing**, differentiated by degree level:
  - MA students: conceptual or design-based framework development.
  - PhD students: empirical discourse analysis with methodological rigor.
- **Engage in structured peer review and scholarly collaboration**, contributing to a shared research ecosystem.
- **Articulate the societal and institutional implications of digital well-being systems**, including issues of agency, ethics, scalability, and technological governance.

III. Methods of Instruction

This course utilizes a blended research-laboratory model combining seminar discussion, structured digital discourse, analytic workshops, and scholarly colloquia.

Instructional methods include:

- **Seminar-Based Theoretical Discussion**
  Critical examination of foundational and contemporary literature.
- **Digital SEL Discourse Laboratory (Moodle-Based)**
  Weekly structured academic dialogue facilitated through a steward model.
- **Cluster Synthesis Studio**
  Collaborative thematic mapping and identification of research gaps.
- **Midterm Research Colloquium**
  Structured scholarly proposal presentations with peer and instructor feedback.
- **AI Discourse Analytics Workshop**
  Demonstration and guided practice in AI-assisted linguistic and thematic analysis.
- **Manuscript Development Workshop**
  Differentiated track-based support for conceptual (MA) and empirical (PhD) writing.
- **Expert Colloquia:** Guest lectures from EdTech researchers and clinical psychologists.

The course emphasizes active intellectual participation, research accountability, and iterative scholarly refinement rather than passive content absorption.

IV. 16-Week Tentative Schedule

Week	Date	Theme	Key Reading & Activity
1	2/26	Introduction	Course overview and research expectations
2	3/5	Foundations of Well-being and the PERMA Model	The Science of Happiness: From Hedonic to Eudemonic well-being. Exploring Positive Emotion, Engagement, Relationships, Meaning, and Achievement. Introduction to Well-being Science (PERMA, SDT, Broaden-and-Build)
3	3/12	Personal Interview	Finding your Tools Sign up the schedule

4	3/19	SEL Core Competencies SEL Meta-Analysis & Impact Global Trends in SEL From CASEL to Digital Ecosystems	Introduction to Digital SEL Discourse Laboratory (Moodle structure) Theme 1 to 10
5	3/26	[Guest Speaker] K-12 SEL Curriculum	Curriculum design & classroom implementation.
6	4/2	[Guest Speaker] Teacher Training on Well-being	Hands-on workshop on teacher resilience.
7	4/9	Digital Transformation of SEL AI & Affective Computing Mindfulness & Digital Agency	Library Contribution 1 due (Foundational paper)
8	4/16	Midterm Presentation	Midterm Presentations: 1. Critical Analysis of a Digital SEL Tool. 2. Proposal for the final paper
9	4/23	[Guest Speaker] Digital workshop (AI agent)	Workshop in the morning
10	4/30	Immersive Tech (VR/AR/MR) Immersive Empathy (VR/AR) Augmented Reality & Play	
11	5/7	Gamification & Flow	Library Contribution 2 due (Contemporary paper)
12	5/14	[Guest 2] Global Best Practices (SG)	System-wide SEL & Global Best Practices.
13	5/21	Cluster Synthesis Studio: **Theme:** Mapping the Intellectual Landscape	Students organized into thematic clusters based on curated articles Lightning 3-minute synthesis per cluster.
14	5/28	AI Discourse Analytics Lab **Theme:** Linguistic Evolution & AI Meta-Reflection	Demonstration of AI-assisted corpus analysis
15	6/4	Manuscript Development Workshop **Theme:** From Idea to Publication	Students submit near-final draft for feedback.
16	6/11	Digital Well-being and SEL Symposium **Theme:** Collective Knowledge Production	

V. Assessment & Grading

Component	Weight
Digital SEL Discourse Laboratory (Moodle)	25%
Tool Critical Analysis Report	20%
Research Library Contribution (2 Articles)	15%
Midterm Research Colloquium (Week 8–9)	10%
Final Research Manuscript (MA/PhD differentiated)	30%

Component	Weight
Total	**100%**

VI. Detailed Assignment Descriptions

1. Digital SEL Discourse Laboratory

Duration: Weeks 5–14
Platform: Moodle (closed academic forum)

Purpose
The Digital SEL Discourse Laboratory is a structured, semester-long academic discourse experiment. Students collaboratively construct a theory-informed quotation community designed to examine how digital language practices shape collective meaning-making and well-being cognition.
This activity serves as both a pedagogical intervention and a research dataset for final manuscripts.

Structure
10 active weeks
4 student stewards per week (randomly assigned)
Weekly themes aligned with course topics
All participation conducted within Moodle

Steward Responsibilities (One Time per Student)
When assigned as a steward, the student must post:

- **Quotation (Required)**
  A scholarly or original quotation clearly related to the weekly theme.
- **Theoretical Explanation (150–200 words)**
  Grounded in course literature
- **Includes at least one academic reference (APA 7)**
- **Two Reflection Prompts**
  Designed to stimulate conceptual engagement rather than personal disclosure.
- **Personal Reflection (Approx. 150 words)**
  Analytical and theory-linked (not diary-style).
- **AI Disclosure Statement**
  Indicating whether AI was used

Weekly Participant Responsibilities
Each student must:

- Post **one micro-reflection (80–120 words)** per week.
- Demonstrate engagement with theoretical constructs.
- Maintain respectful, academically grounded discourse.

This laboratory is an academic activity and not a therapeutic intervention.

2. Tool Critical Analysis Report

Due: **Week 10**
Length: **2,000–2,500 words**
Format: **APA 7**
Purpose
Students critically evaluate a contemporary digital tool, AI system, immersive platform, or gamified intervention claiming to enhance well-being or social-emotional development.
Required Components

- Description of the Tool
- Underlying Psychological Mechanisms
  (e.g., PERMA, SDT, Flow Theory, Narrative Identity)
- Empirical Support Evaluation
- Ethical Considerations
- Risks and Limitations
- Scalability and Ecosystem Implications
- Future Research Directions

3. Collective Research Library Contribution
Each student contributes two high-quality scholarly articles **to the shared class research database.**
Requirements:

- One foundational or theoretical article
- One contemporary empirical or applied article (preferably 2023–2026)

For each article, students must submit:

- Full APA citation
- 150–200 word annotation explaining:
- Theoretical significance
- Relevance to Digital SEL and Well-being
- Potential contribution to research or design

Purpose
To collectively construct a curated scholarly foundation supporting final manuscripts and cluster synthesis work.
4. Midterm Research Colloquium (Weeks 8–9) Students present their proposed final manuscript direction and Critical Analysis of a Digital SEL Tool.

- PhD Track (Individual)
- MA Track (Group Presentation, 3–4 students)

5. Final Research Manuscript
Due: **Week 16**
Submission: **Publication-ready format**
MA Track (Conceptual / Design-Oriented)

- Length: 3,000–4,000 words
- Students develop:
- A conceptual framework
- A Digital SEL intervention model
- An ecosystem design proposal
- Must include:
- Literature review

- Theoretical grounding
- Visual model (diagram encouraged)
- Ethical considerations
- Future implementation implications

PhD Track (Empirical Discourse Analysis)

- Length: 5,000–7,000 words
- Students conduct:
- Thematic or linguistic analysis of anonymized class discourse
- AI-assisted semantic analysis (with transparent prompt documentation)
- Theoretical interpretation
- Methodological justification
- Ethical disclosure
- Manuscript must follow journal-style structure.
